Sip & Purr Cafe’s
Stock & Sale Management System

Digital Minds

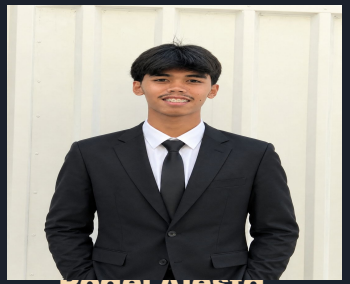

Team Roles and Responsibilities

Lara Mae Guia,

Project Manager,

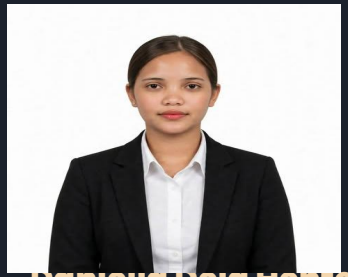

Responsible for leading the team, assigning tasks, monitoring, processing, and ensuring the project is completed on time.

Rodel Ajesta,

Business Analyst,

Responsible for gathering and analyzing user requirements and identifying the needs and goals of the proposed systems.

Daniella Dela Hente Hente

Designer,

Responsible for designing the system's interface, layout, and overall user experiences to make it attractive and easy to use.

Allan Jr., Saguin,

Programmer,

Responsible for writing code, developing system features, fixing bugs, and ensuring that the system functions properly.

Stephanie Dela

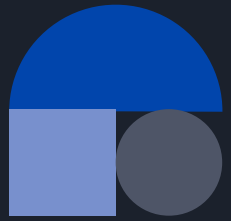

Quality Business

Responsible for testing the system, identifying errors, checking functionality, and ensuring that the system meets the required standards.

Problem Statement

Sip and Purr Cafe manages its products, supplies, inventory, and daily sales to support its business operations. Keeping track of product stock quantities and sales using manual inventory checks and handwritten records can be time-consuming and may lead to errors.This manual process can make it difficult to monitor available products, record sales accurately, identify low-stock items, and maintain organized inventory records. As a result, the café may experience inaccurate stock counts, delays in daily operations, and difficulties ensuring that popular products and supplies are always available. Therefore, a Sip and Purr Café Stock and Sales Management System is proposed to help organize product records, monitor inventory, record sales transactions, automatically update stock quantities, and provide low-stock warnings. The system aims to improve the accuracy of records, save time, and make the café's daily operations more efficient.

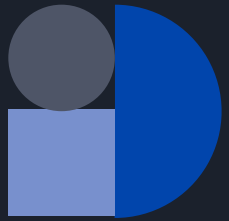

Objectives

OBJECTIVE 1

Organize Stock Records

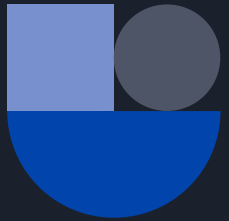

Allow users to add, view, and update products and supply information for easier stock management.

OBJECTIVE 2

Monitor Stock Levels

Help users identify low-stock, unavailable, damaged, and expired products to maintain sufficient supplies.

OBJECTIVE 3

Record Daily Sales

Provide a simple way to record sales transactions and review daily sales totals for better business tracking

Project phase:

Scope

The Sip and Purr Cafe's Stock & Sales Management System is designed to help the cafe manage its product inventory and daily sales. The system allows authorized users to add, view, search, and update product records, including product name, category, price, and stock quantities. It also records sales transactions and calculates the total amount. Automatically deducts sold quantities from available stock. Displays low-stock warnings and provides simple sales reports and inventory summaries.

Delimitation

The system focuses only on basic stock and sales management for Sip & Purr Cafe. It does not include online ordering, delivery services, online payment processing, customer account management, or advanced financial reporting. The system is intended for use by cafe staff or authorized users and is limited to the features developed for this project.

Project phase:

System Features:

Product Management
- Add new cafes' products with their name, category, price, and stock quantity
- View, search, and update product records.

Inventory Management
- Monitor available stock quantities
- Update stock when new supplies arrive.
- Display a low-stock warning when products reach their minimum stock levels

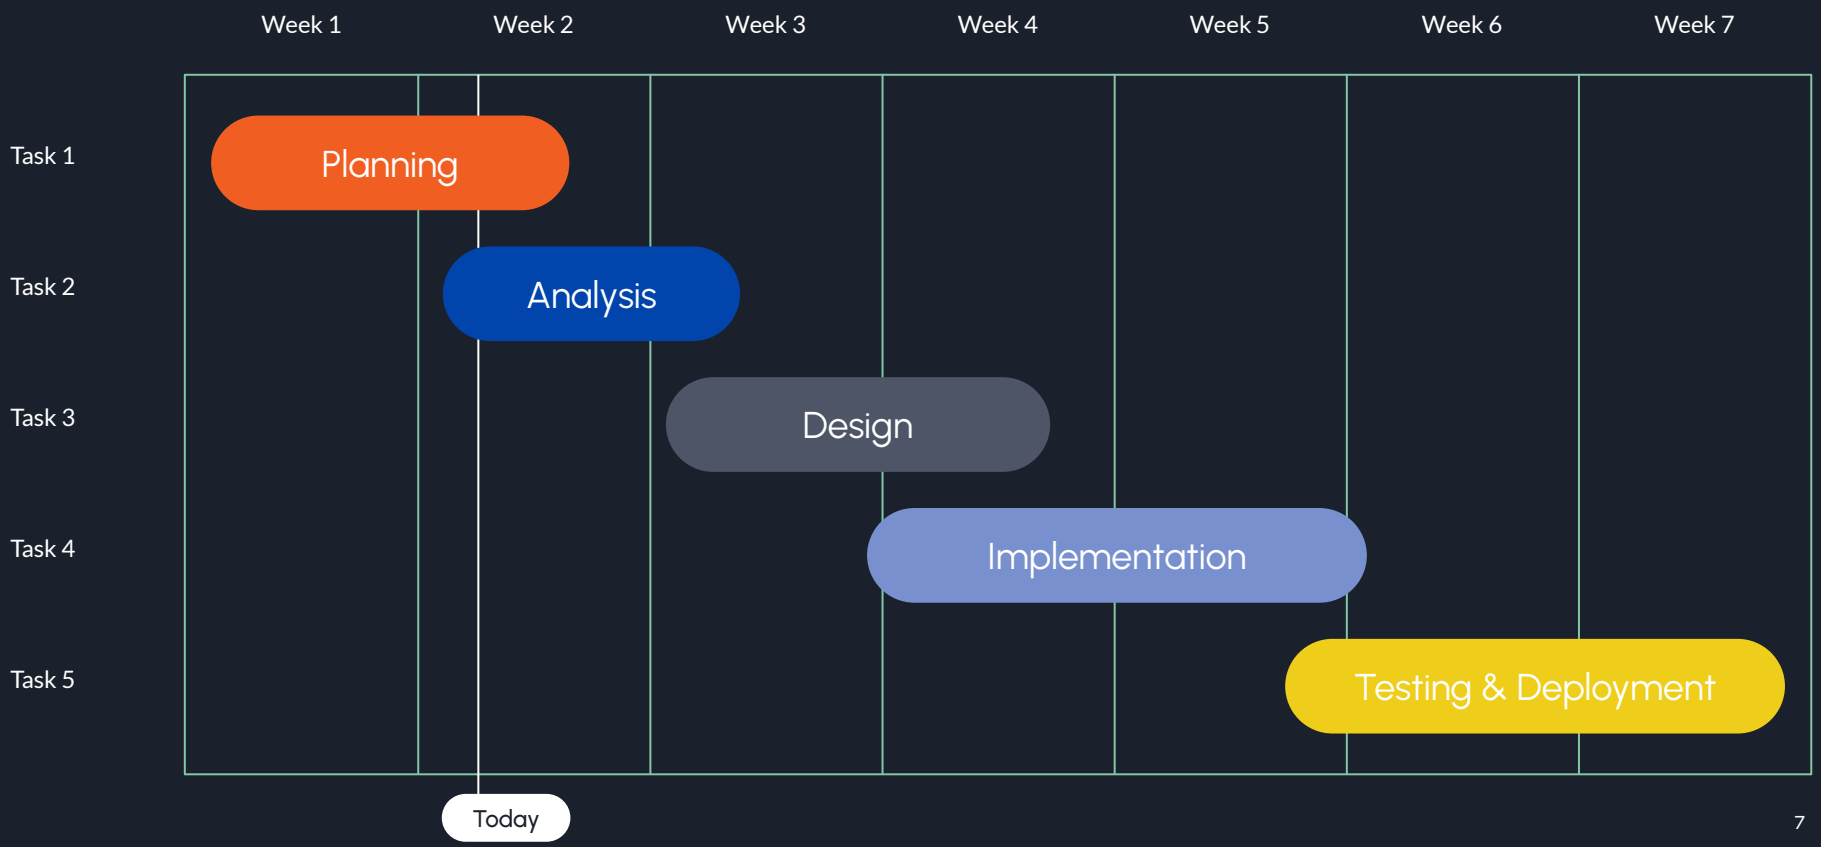

Sales Management
- Recond daily sales transactions.
- Calculate the total price of purchased products.
- Automatically deduct sold quantities from available stock.

Sales Reports
- Views daily sales records and total sales.
- Generate simple inventory summaries for easier monitoring.

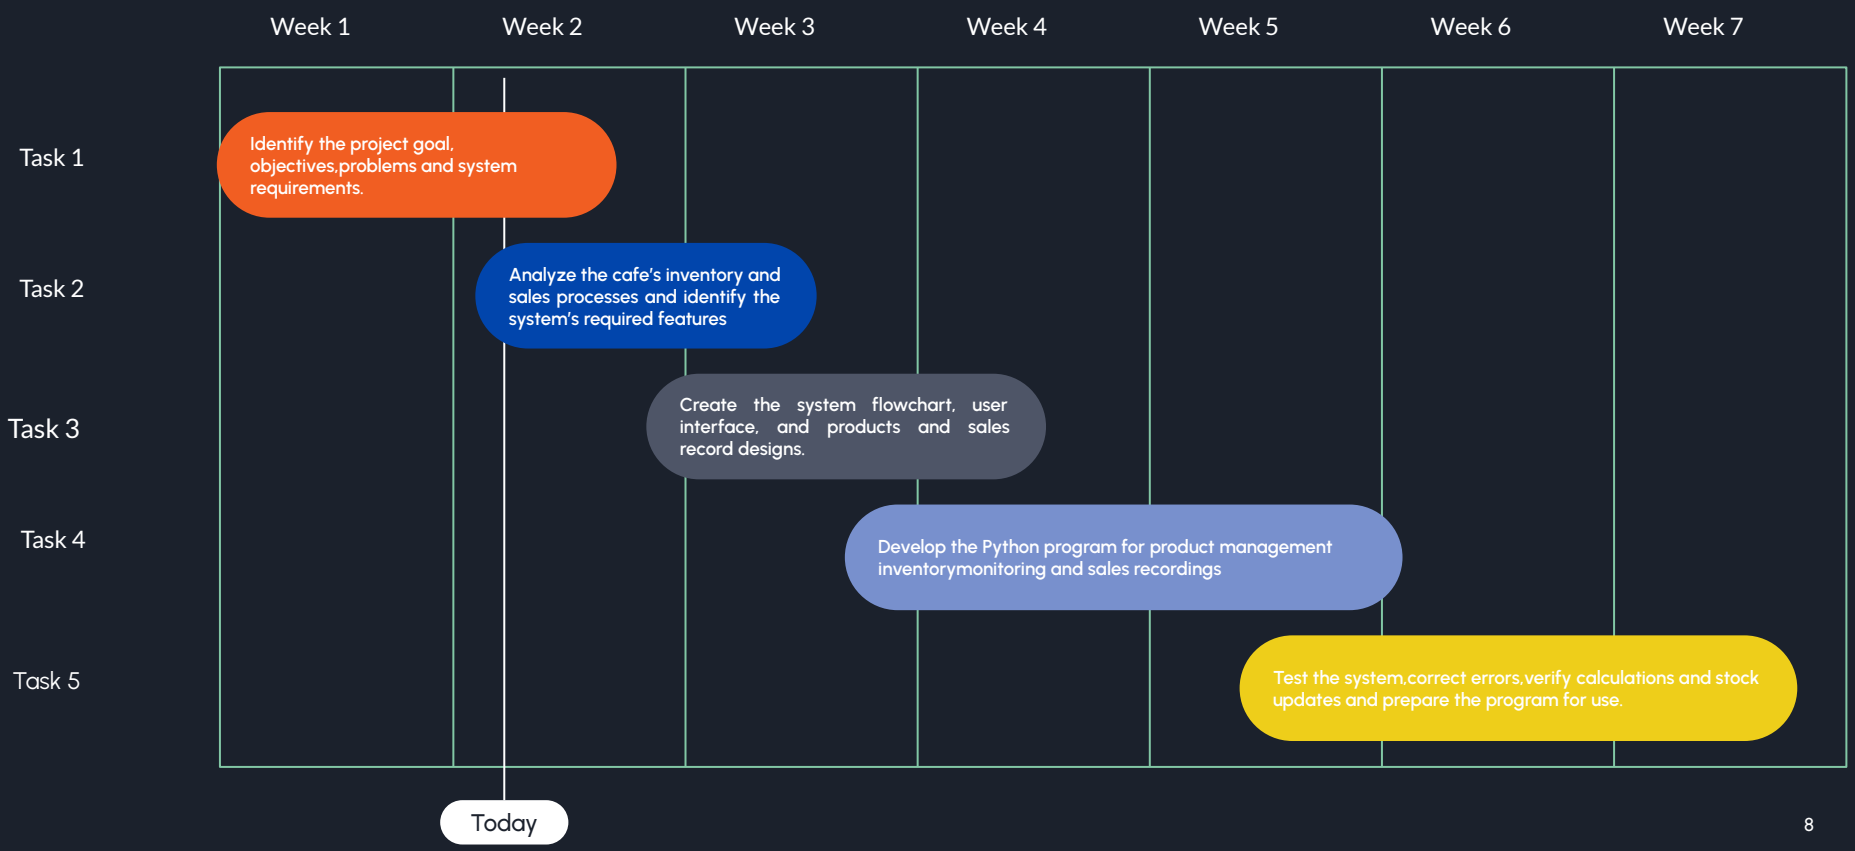

Record Management
- Keep product, inventory, and sales records organized.
- Reduce errors in manual calculations and record keeping.
